

Preparation of Samples

Quantity

Our goal is to have enough samples to correctly represent your product and avoid visible repetition.

Samples under 300mm ...in one or more face dimensions e.g., Bricks, Paving Blocks	Samples over 300 mm ...in all face dimensions e.g., Paving Slabs	Tips for Ceramic and Porcelain Products When selecting samples, avoid repetition by ensuring that you select unique printed faces.
<p>Single Colours: 10 to 20</p> <p>Blended Colours: 20 to 30</p> <p>For convenience, feel free to send 20 of all product colours.</p>	<p>Single Colours: 6 to 10</p> <p>Blended Colours: 10 to 16</p> <p>For convenience, feel free to send 10 of all product colours.</p>	

Packing Checklist

Please ensure your samples are:

- Clearly labelled with product name or product code.
- Clean and dry, as dampness can cause staining.
- Placed on edge to prevent cracking.
- Protected on all sharp or square edges. (See 'Cushioning Materials' below)

Cushioning Materials

It is important to use packaging materials that provide sufficient cushioning to prevent surface and edge damage when in transit.

Using Foam? Select foam that is 'closed cell' as this is more resistant to loading than 'open cell' foam. Sheets at least 4mm thickness are recommended.

Sending Bricks? For Brick products that require header photography, ensure that header as well as stretcher faces are protected from contact.

Suitable Materials	Unsuitable Materials
<p>Corriboard Sheets at least 2mm thick are recommended.</p> <p>Corrugated Cardboard</p> <p>Polyurethane Foam</p> <p>Polyethylene Foam</p> <p>Polystyrene Foam</p> <p>Reconstituted Foam (Also known as Foam Chip, Crumb Foam)</p>	<p>Paper Does not provide cushioning.</p> <p>Plastic Film Does not provide cushioning.</p> <p>Bubble Wrap Compresses with heavy samples.</p>
